

Scientific Workshop Report

10. March 2016

This deliverable reports on the 1st International Workshop on Cloud Security and Data Privacy by Design (CloudSPD'15) that was successfully organized by the PaaSword consortium. It involves details regarding the workshop organisation along with descriptions of its main results in terms of presentations and discussions with international experts on cloud computing and security. This workshop aimed to provide fertile ground for creative debate and presentation of research results, practical experiences, and innovative ideas touching all security aspects related to cloud computing. CloudSPD'15 focused on Cloud Computing security, and invited research efforts from both academia and industry in order to facilitate the dissemination of research and development of the next generation cloud platforms, applications and methods that will lead, by design, to better and more secure cloud-based systems. An overview of the six accepted papers is presented while it summarizes the discussions that took place after each paper presentation. In addition, this deliverable provides the workshop logistics concerning the website, the submission process, the scientific committee, the final program of the event and presents a number of photos that capture CloudSPD'15.
